

Myola Palm

Archontophoenix myolensis

Height: 65 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 9b

Other Names: King Palm

Description:

This majestic palm can grow quite tall, with long, gracefully arching leaves; likes water more than most palms and thrives near creeks and streams; attractive in the landscape, planted individually or in groupings

Planting & Growing

Myola Palm will grow to be about 65 feet tall at maturity, with a spread of 20 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a fast rate, and under ideal conditions can be expected to live for 60 years or more. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This tropical plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.
