

Arenga Palm
Arenga australasica

Height: 60 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 9b

Other Names: Australian Sugar Palm

Description:

A large, clumping palm that is dense and wide spreading; glossy, dark green fronds are widely spaced along the trunk which lacks a crownshaft; trunks die after flowering; very sensitive to poor drainage; great for large landscapes

Planting & Growing

Arenga Palm will grow to be about 60 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 60 years or more. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This tropical plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.
