Hardy Bamboo Palm
Chamaedorea microspadix

Height: 8 feet

Spread: 5 feet

Sunlight:  

Hardiness Zone: 9a

Other Names: Parlor Palm, Parlour Palm

Description:

A compact, clump forming palm that is low maintenance; graceful fronds arch out from central stems, creating an elegant accent for the patio or garden; great for bright, filtered light areas; attractive fruit on female plants; do not overwater

Planting & Growing

Hardy Bamboo Palm will grow to be about 8 feet tall at maturity, with a spread of 5 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. This is a dioecious species, meaning that individual plants are either male or female. Only the females will produce fruit, and a male variety of the same species is required nearby as a pollinator.

This tropical plant does best in partial shade to shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This species is not originally from North America. It can be propagated by cuttings.
