# **Opening Act Ultrapink Phlox** Phlox 'Opening Act Ultrapink'

Height: 28 inches Spread: 3 feet

Spacing: 32 inches

Sunlight: 0

Hardiness Zone: 4a

Other Names: Hybrid Garden Phlox Group/Class: Opening Act Series

## **Description:**

An early blooming phlox with a naturally dwarf habit; fluorescent rose pink flowers bloom profusely from early to late summer; great for borders or in containers; dark green glossy foliage is mildew and disease resistant

#### **Ornamental Features**

Opening Act Ultrapink Phlox features showy clusters of rose star-shaped flowers with pink overtones at the ends of the stems from early to late summer. Its glossy narrow leaves remain dark green in colour throughout the season.

# **Landscape Attributes**

Opening Act Ultrapink Phlox is an herbaceous perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Opening Act Ultrapink Phlox is recommended for the following landscape applications;

## **Planting & Growing**

Opening Act Ultrapink Phlox will grow to be about 22 inches tall at maturity, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 32 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 1 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in rich soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Opening Act Ultrapink Phlox is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. It can be used either as 'filler' or as a 'thriller' in the 'spiller-thriller-filler' container combination, depending on the height and form of the other plants used in the container planting. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
