

Dark Beauty Bishop's Hat

Epimedium grandiflorum 'Dark Beauty'

Plant Height: 10 inches

Flower Height: 14 inches

Spread: 15 inches

Spacing: 12 inches

Sunlight:  

Hardiness Zone: 5a

Other Names: Barrenwort, Fairy Wings

Description:

Delicate shooting star-like rose-lavender flowers with white spurs; shield-shaped green leaves emerge deep bronze-purple in spring and fall; a great groundcover that is tolerant of dry shade once established; evergreen in warmer climates

Ornamental Features

Dark Beauty Bishop's Hat features delicate nodding lavender star-shaped flowers with rose overtones and white spurs rising above the foliage in mid spring. Its attractive heart-shaped leaves emerge deep purple in spring, turning green in colour with hints of coppery-bronze. As an added bonus, the foliage turns gorgeous shades of coppery-bronze and in the fall.

Landscape Attributes

Dark Beauty Bishop's Hat is a dense herbaceous evergreen perennial with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Dark Beauty Bishop's Hat is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens
- Container Planting

Planting & Growing

Dark Beauty Bishop's Hat will grow to be about 10 inches tall at maturity extending to 14 inches tall with the flowers, with a spread of 15 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in partial shade to shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider covering it with a thick layer of mulch in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Dark Beauty Bishop's Hat is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
