Spiny Fiber Palm
Trithrinax acanthocoma

Height: 20 feet

Spread: 10 feet

Sunlight:

Hardiness Zone: 8b

Other Names: Brazilian Needle Palm, *Trithrinax brasiliensis*

Description:

This solitary variety makes a great garden or landscape accent; large, beautiful dark green fan-like leaves, crown a trunk that has an interesting woven, cross hatch pattern with sharp spines; tolerates drought and adapts to a wide variety of soils

Planting & Growing

Spiny Fiber Palm will grow to be about 20 feet tall at maturity, with a spread of 10 feet. It has a high canopy of foliage that sits well above the ground, and is suitable for planting under power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more. This is a dioecious species, meaning that individual plants are either male or female. Only the females will produce fruit, and a male variety of the same species is required nearby as a pollinator.

This tropical plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America.

Spiny Fiber Palm is a fine choice for the yard, but it is also a good selection for planting in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
