

Renoir Lily
Lilium 'Renoir'

Plant Height: 24 inches

Flower Height: 32 inches

Spread: 14 inches

Spacing: 12 inches

Sunlight:

Hardiness Zone: 3a

Group/Class: Asiatic Hybrid

Description:

Renoir - as lovely as a fine painting by its namesake; glorious soft pink blooms with deeper pink veins make a spectacular display in early summer; upward facing blooms are very romantic for cut flowers and for perennial borders

Ornamental Features

Renoir Lily features bold hot pink trumpet-shaped flowers with white streaks at the ends of the stems in early summer, which emerge from distinctive rose flower buds. The flowers are excellent for cutting. Its narrow leaves remain green in colour throughout the season.

Landscape Attributes

Renoir Lily is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Renoir Lily is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Renoir Lily will grow to be about 24 inches tall at maturity extending to 32 inches tall with the flowers, with a spread of 14 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
